

# The evidence infrastructure for agricultural transition.

Making change in productive land legible to capital.

RAISING €250,000 STRATEGIC PRE-SEED

# A small round to cross a meaningful value inflection.

**Mārama is raising acceleration capital - not survival capital.**

€250K

Strategic pre-seed

~5%

Target equity position

12-MONTH

RUNWAY

2-4

Disciplined design / paid pilots

---

Capital is intended to productise SoilArc, build the delivery infrastructure, fund founder remuneration, add specialist capability and prove the workflow with real capital users.

Founder remuneration: €6,000 gross/month for 12 months (€72,000 gross), included in the round budget.

# Agriculture doesn't lack data. It lacks continuity.

Farm records, management changes, soil observations, production, weather, inputs and financial information exist in different places, at different times and with different levels of confidence.

## A SNAPSHOT

A single point in time.

## A TRAJECTORY

A view of change over time.

Capital needs to understand whether transition is improving, persisting or reversing.

# From fragmented evidence to contextual intelligence.

We connect observations through time to build a clearer view of what is changing, whether it is persisting, and how confidently that direction can be understood.

Mārama is building the translation layer between agricultural transition and financial decision-making.

# A portable evidence record for agricultural transition.

SoilArc is the evidence and intelligence engine. STEP is the portable record it produces, bringing together direction, evidence confidence and operating context for financing and investment conversations.

A common language  
for land and capital.

- **TRAJECTORY**  
A view through time
- **EVIDENCE CONFIDENCE**  
What the data can say
- **OPERATING CONTEXT**  
Context for decision-making
- **PORTABLE**  
Designed to travel

# Working engine. Tested evidence. Pilot software in build.

**INVESTOR POINT** The methodology and engine exist. This round funds the software layer and real pilot use.

# Start with capital users managing several farms.

Funds and asset managers can bring several assets through one relationship, creating the clearest route to paid deployment.

## PRIMARY AGRICULTURAL INVESTORS

Use transition evidence across portfolios and investment decisions.

## PRIMARY ASSET MANAGERS

Apply a comparable long-term view across several assets.

## ADJACENT LENDERS

Bring structured evidence into lending decisions.

## LATER INSURERS + OTHER CAPITAL PROVIDERS

Explore resilience and changing conditions.

# Revenue starts with evidence work and grows into recurring infrastructure.

01

## ASSESS + PILOT

Paid farm and portfolio assessments.  
Prove utility, workflow and willingness to pay.

02

## MONITOR + UPDATE

Recurring monitoring, evidence updates  
and STEP refreshes as farms change.

03

## PLATFORM + LICENSE

Software access and potential licensing  
for capital providers and partners.

Near-term commercial proof is not theoretical ARR. It is paid pilots, repeatable delivery cost and evidence that customers return for updates.

# The moat is trusted interpretation - then repeatable data advantage.

# A founder-led team spanning capital, technology and soil systems.

RICHARD BUCHANAN

## FOUNDER & CEO

Institutional finance, real assets, natural capital and investment architecture.

**Role: company leadership, capital formation, partnerships and governance.**

CHRISTOPHER MCGREGOR

## CTO

Software architecture, engineering delivery, technical operations and productisation.

**Role: turning SoilArc into a repeatable software and evidence platform.**

NEXT CAPABILITY • SOIL / AGRONOMIC AUTHORITY • ANALYTICAL OPERATIONS • IP / DATA GOVERNANCE

# €250k funds a 12-month build, including founder remuneration.

*Illustrative allocation - final budget to be set against confirmed technical, data and pilot delivery costs.*

# Cross the next valuation threshold before raising meaningful equity.

-  **01 PILOT-READY SOFTWARE** A usable interface around SoilArc that carries farm evidence through to a STEP output.
-  **02 REAL PILOTS** 2-4 disciplined pilots, including paid customer evidence.
-  **03 REPEATABLE DELIVERY** Clear ingestion, QA and STEP production workflow.
-  **04 TRUST** Scientific authority, provenance, data rights and governance strengthened.
-  **05 COMMERCIAL SIGNAL** Evidence of repeat use, expansion or portfolio deployment.

THE NEXT ROUND SHOULD BE RAISED FROM A POSITION OF CUSTOMER PROOF, NOT PRODUCT PROMISE.

# We are looking for more than a cheque.

The right investor understands the journey from evidence methodology to trusted infrastructure - and can help Mārama build it without forcing premature scale.

—————

LAND + NATURAL CAPITAL

Understands productive assets and long-term transition.

—————

ENTERPRISE INFRASTRUCTURE

Understands patient B2B adoption and integration.

—————

IP + LICENSING

Can help shape defensible commercial architecture.

—————

NETWORK + ACCESS

Can open doors to funds, lenders and strategic partners.

## €250,000 STRATEGIC PRE-SEED

Target: approximately 5% equity, subject to structure and strategic value.

SEE THE CHANGE.  
UNDERSTAND THE DIRECTION.
