

The evidence infrastructure for agricultural transition.

Making change in productive land legible to capital.

RAISING €1M INSTITUTIONAL PRE-SEED

A focused round to reach institutional proof.

Mārama is raising build capital to turn SoilArc into decision infrastructure for real land and capital users.

€1M

Institutional
pre-seed

18-MONTH

Target runway

3-5

Farm / portfolio pilots

SCIENTIFIC
LEAD

Scientific capability

Capital is intended to productise SoilArc, resource commercial, technical and scientific capability, build delivery infrastructure, and prove the workflow with real capital users.

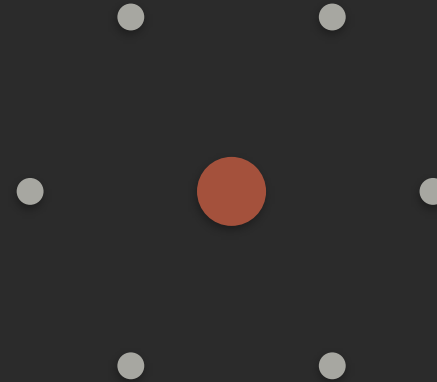

The round is designed to fund an 18-month build, real pilots, scientific assurance and the transition from prototype to repeatable product.

Agriculture doesn't lack data. It lacks a trusted story of change.

Farm records, management changes, soil observations, production, weather, inputs and financial information exist in different places, at different times and with different levels of confidence. The question is what story they can responsibly support.

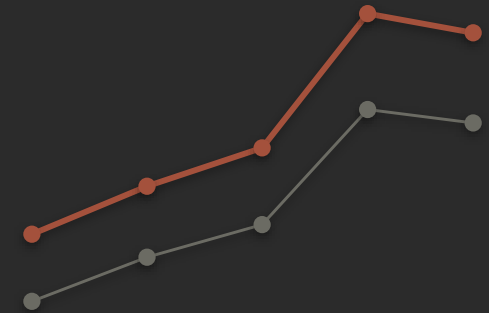

A SNAPSHOT

A single point in time.

A TRAJECTORY

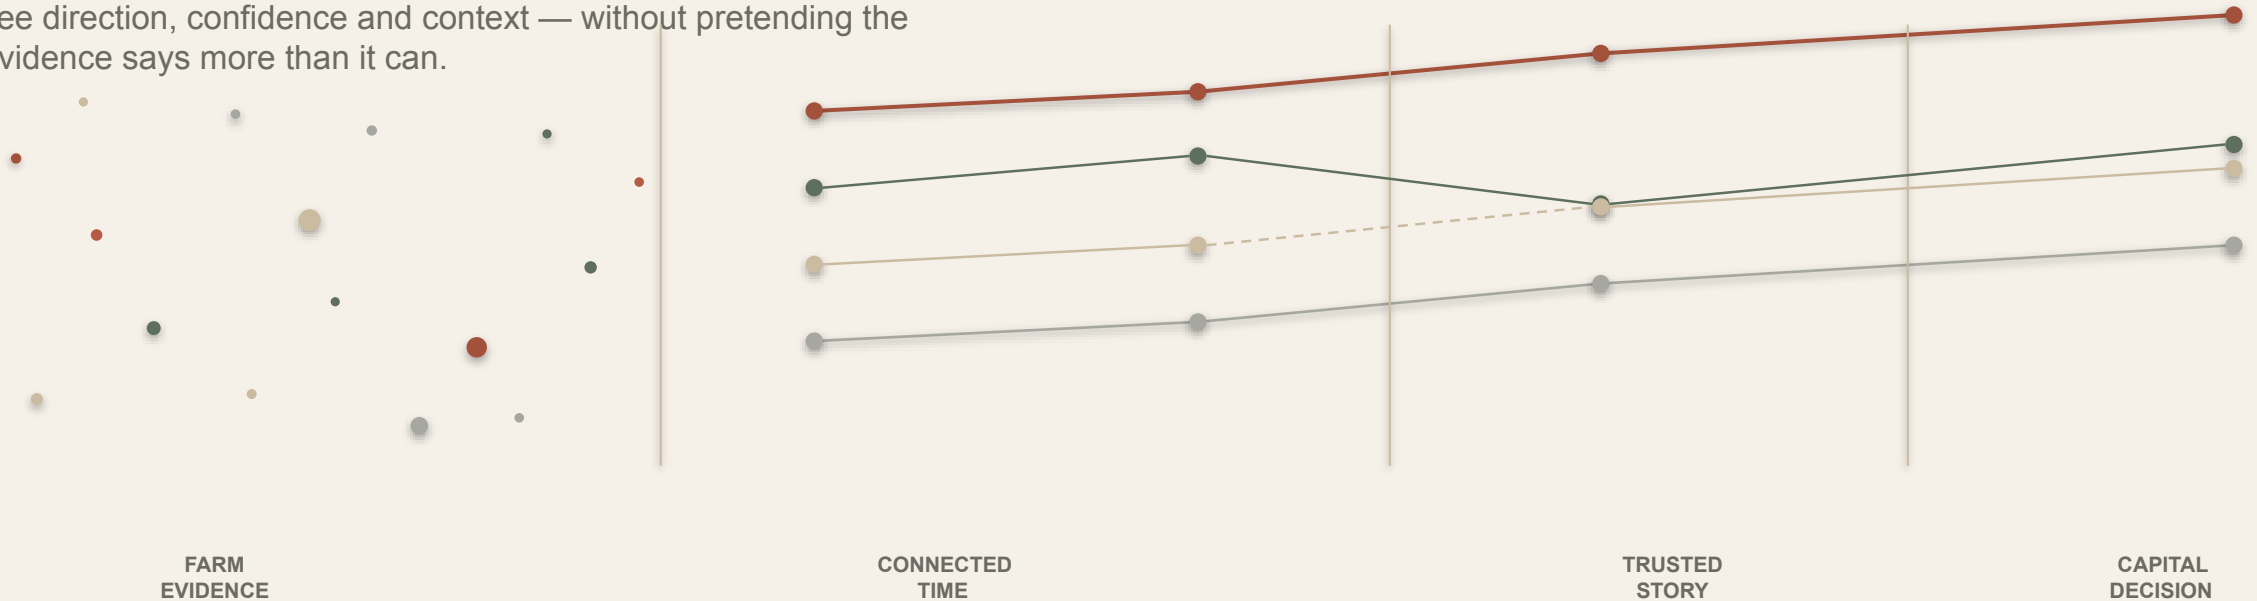

A view of change over time.

Capital needs to understand whether the farm is improving, persisting, reversing — and how much confidence to place in that story.

SoilArc builds the trusted story of how a farm is changing.

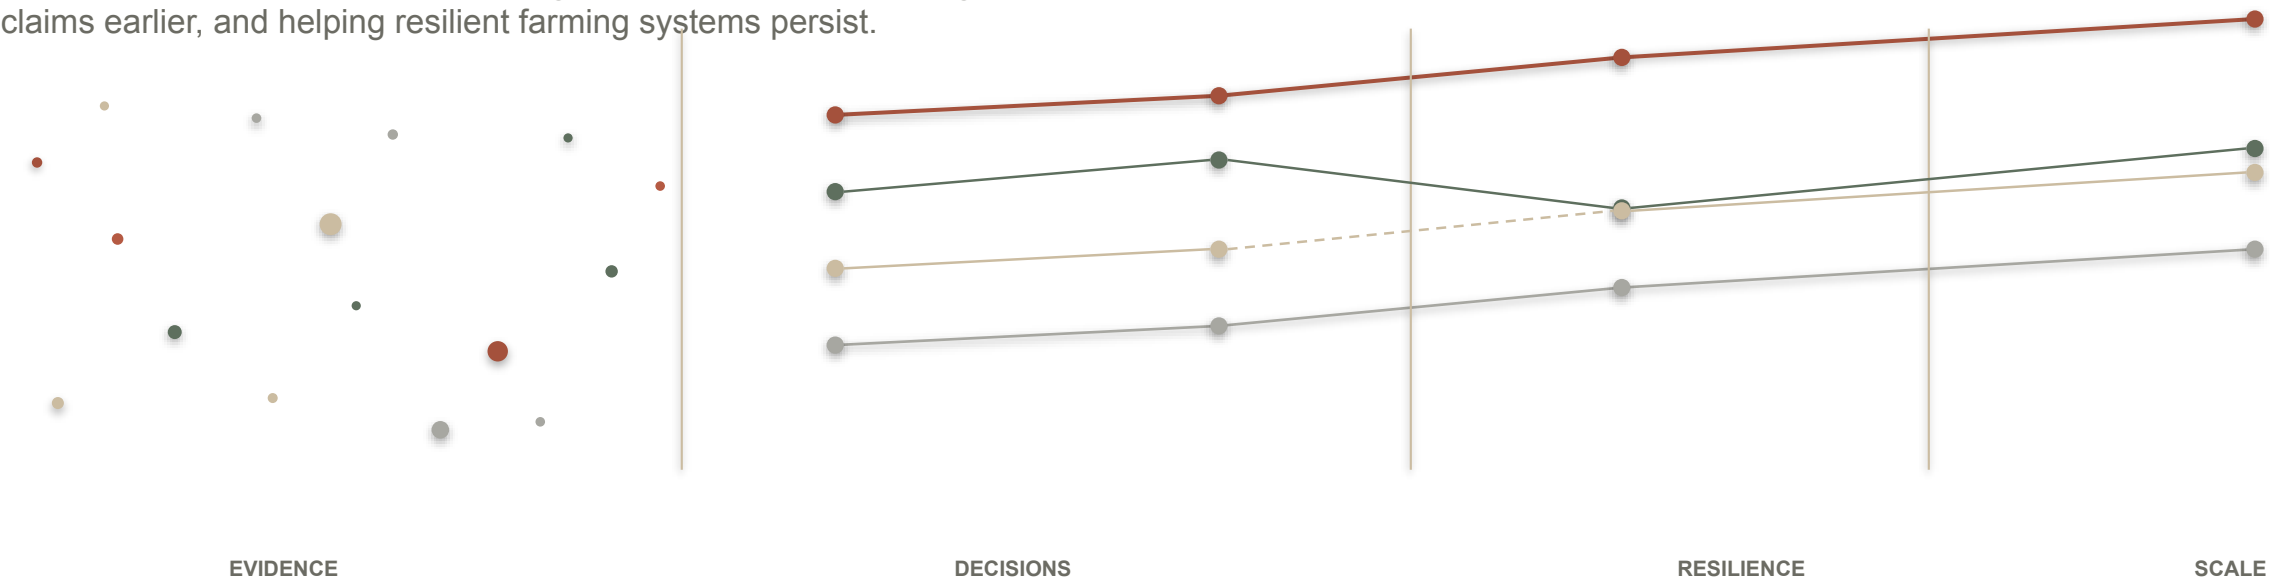

It connects scattered observations through time so capital users can see direction, confidence and context — without pretending the evidence says more than it can.

SoilArc is the basis: the engine that turns land evidence into decision-useful transition intelligence.

What changes when SoilArc works?

The impact is better decisions: funding credible transition, spotting weak claims earlier, and helping resilient farming systems persist.

INSTITUTIONAL LEVERAGE • ONE RELATIONSHIP CAN SPAN HUNDREDS OF THOUSANDS OF ACRES

MANULIFE >400K ACRES • UBS ~280K ACRES • SLM PARTNERS 297,506 HA

Scale potential, not forecast: one engine → many capital users → thousands, ultimately tens of thousands, of agricultural assets.

Illustrative institutional reach. Sources: Manulife Investment Management; UBS Global Real Assets; SLM Partners. Current public figures accessed Sep 2026.

A portable evidence record for the farm's transition story.

SoilArc is the evidence and intelligence engine. It builds the trusted story of how a farm is changing. STEP is the portable record it produces for financing and investment conversations.

A common language
for land and capital.

- **TRAJECTORY**
A view through time
- **EVIDENCE CONFIDENCE**
What the data can say
- **OPERATING CONTEXT**
Context for decision-making
- **PORTABLE**
Designed to travel

Working engine. Internal validation. Now moving to funded pilots.

ENGINE

Deterministic SoilArc logic implemented as code and tests.

EVIDENCE

Biological and operating-resilience validation programmes completed.

PRODUCT

STEP Product and Output Specification v1.1 defines the portable evidence record.

MARKET

Four prospective institutional / strategic users have asked to review SoilArc once the live product is available.

INVESTOR POINT The methodology and engine exist. This round funds the software layer, scientific capability and real pilot use.

Start with capital users managing several farms.

Funds and asset managers can bring several assets through one relationship, creating the clearest route to paid deployment.

PRIMARY AGRICULTURAL INVESTORS

Use transition evidence across portfolios and investment decisions.

PRIMARY ASSET MANAGERS

Apply a comparable long-term view across several assets.

ADJACENT LENDERS

Bring structured evidence into lending decisions.

LATER OTHER CAPITAL PROVIDERS

Extend only where the evidence supports it.

Revenue starts with evidence work and grows into recurring infrastructure.

01

ASSESS + PILOT

Paid farm and portfolio assessments.
Prove utility, workflow and willingness to pay.

02

MONITOR + UPDATE

Recurring monitoring, evidence updates
and STEP refreshes as farms change.

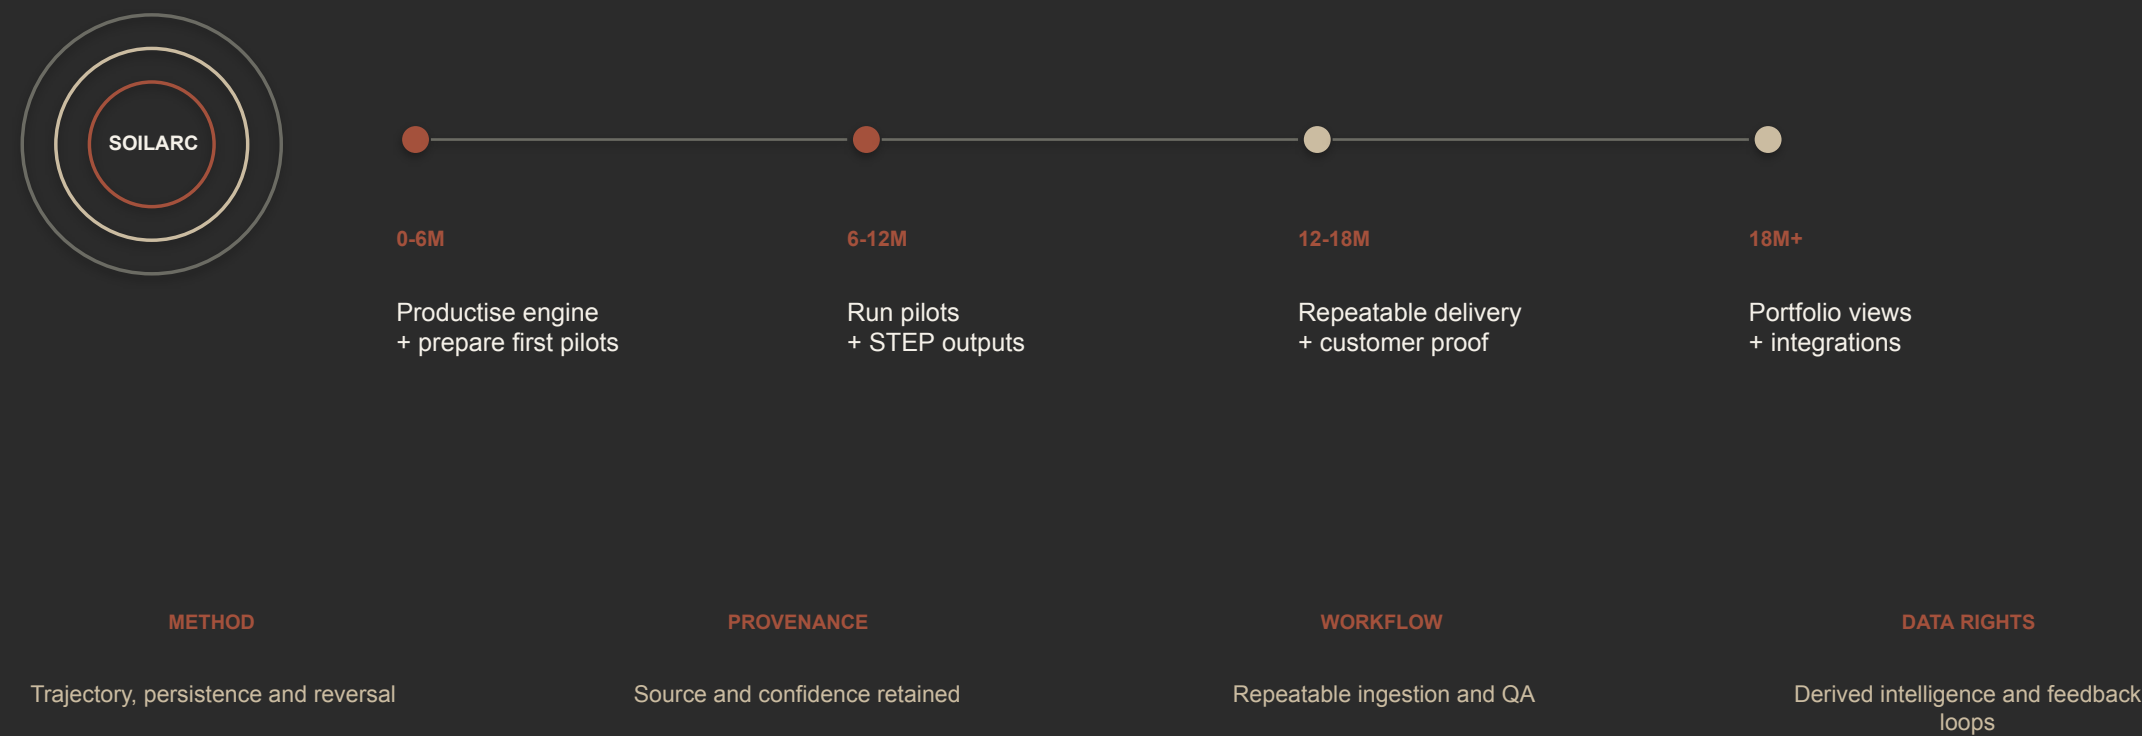

03

PLATFORM + LICENSE

Software access and potential licensing
for capital providers and partners.

Near-term commercial proof is not theoretical ARR. It is paid pilots, repeatable delivery cost and evidence that customers return for updates.

The moat is trusted interpretation - then repeatable data advantage.

A founder-led team spanning capital, technology and scientific systems.

RICHARD BUCHANAN

FOUNDER & CEO

Institutional finance, real assets, natural capital and investment architecture.

Role: commercial leadership, capital formation, partnerships and governance.

CHRISTOPHER MCGREGOR

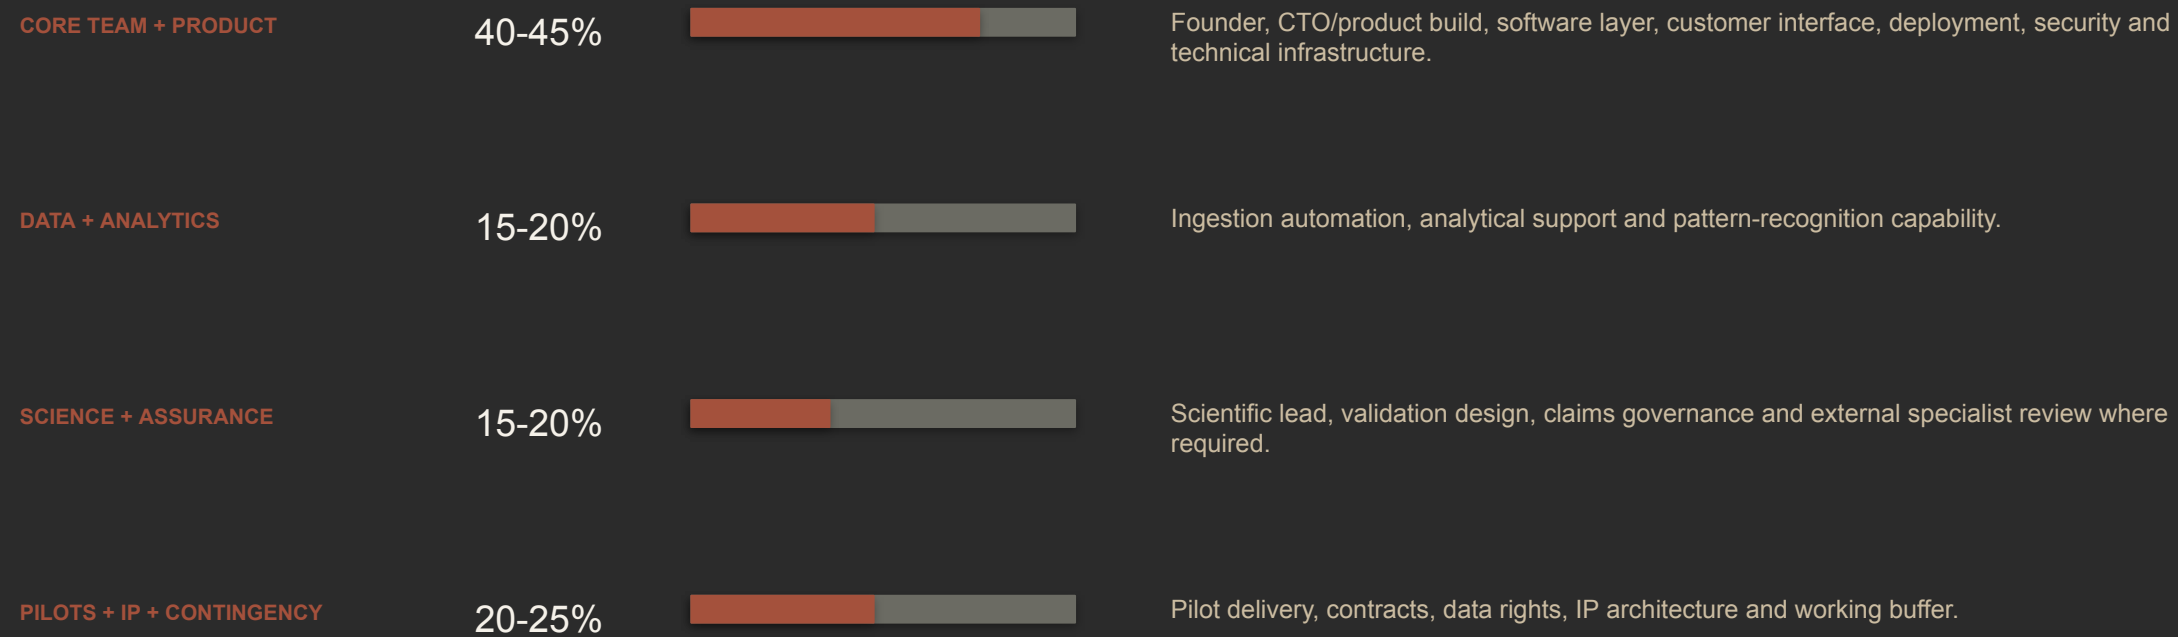

CTO

Software architecture, engineering delivery, technical operations and productisation.

Role: turning SoilArc into a repeatable software and evidence platform.

NEXT CAPABILITY • SCIENTIFIC LEAD • CLIMATE / NATURE SYSTEMS • ANALYTICAL OPERATIONS • IP / DATA GOVERNANCE

€1m funds an 18-month build to reach institutional proof.

Illustrative allocation - final budget to be set against confirmed technical, scientific, data and pilot delivery costs.

Reach customer and impact proof before the next institutional round.

-  **01 PILOT-READY SOFTWARE** A usable interface around SoilArc that carries farm evidence through to a STEP output.
-  **02 REAL PILOTS** 3-5 disciplined pilots, including paid customer evidence.
-  **03 REPEATABLE DELIVERY** Clear ingestion, QA and STEP production workflow.
-  **04 TRUST** Scientific lead/capability, provenance, data rights and governance strengthened.
-  **05 COMMERCIAL SIGNAL** Evidence of repeat use, expansion, portfolio deployment and real-world decision value.

THE NEXT ROUND SHOULD BE RAISED FROM CUSTOMER, SCIENTIFIC AND IMPACT PROOF — NOT PRODUCT PROMISE.

We are looking for more than a cheque.

The right investor understands the journey from evidence methodology to trusted infrastructure - and can help Mārama prove real-world impact without forcing premature scale.

—————

LAND + NATURAL CAPITAL

Understands productive assets, agricultural transition and land resilience.

—————

ENTERPRISE INFRASTRUCTURE

Understands patient B2B adoption and integration.

—————

IP + LICENSING

Can help shape defensible commercial architecture.

—————

NETWORK + ACCESS

Can open doors to funds, lenders and strategic partners.

€1M INSTITUTIONAL PRE-SEED

Structure and ownership to be agreed based on lead investor, syndicate quality and strategic value.

SEE THE CHANGE.
UNDERSTAND THE DIRECTION.
